

# Chromicent GmbH

Best Practice Implementation  
with iLES System

## Introduction:

Chromicent GmbH, a pharmaceutical service laboratory, faced the challenge of optimizing their laboratory processes while ensuring regulatory compliance. This case study explores how Chromicent leveraged iVention's iLES system and the "best practice" methodology to address these challenges.

## The Challenge:

As a pharmaceutical service laboratory, Chromicent recognized the critical importance of data integrity and compliance in their operations. The need for a robust Laboratory Information Management System (LIMS) led them to explore various solutions, ultimately choosing iVention's iLES system.

## SUCCESS STORIES:

Chromicent's success with iVention's iLES system and the "best practice" methodology is not unique. Other pharmaceutical companies have successfully implemented similar approaches, customizing workflows to meet specific regulatory requirements while maintaining operational efficiency.

## THE SOLUTION:

### iLES System Selection:

Chromicent's decision to choose iVention's iLES system was based on its robustness, efficiency, and adherence to quality-by-design principles. The pre-configured modules and customizable workflows of iLES allowed for individual users' unique requirements.

### Best Practice Implementation:

Chromicent adopted the "best practice" methodology during the implementation process. This approach significantly reduced the implementation timeline and validation efforts compared to alternative methods. Customizing workflows to meet specific needs while ensuring regulatory compliance became a seamless process.

### Achieving Efficiency:

The streamlined implementation process not only met regulatory standards but also enhanced the overall efficiency of Chromicent's laboratory processes. The "best practice" methodology proved instrumental in balancing customization with adherence to industry regulations.

## CONCLUSION:

In conclusion, the combination of the "best practice" implementation method and the iLES system provided Chromicent with a LIMS system that met their needs for robustness, efficiency, and adherence to quality-by-design principles. This approach resulted in a shorter implementation time and lower validation effort.
